CellSonic Medical

There are two essential features to a shockwave: be sudden and penetrate to the required place in the body. CellSonic has spent eight years researching the best way to achieve these objectives and now presents the newest and best hand-held lithotripter available today. The shocks are a bang made by a high voltage flash of electricity jumping between two points four times a second. There is nothing faster than a high voltage flash. The sudden bang is focussed into the body by a reflector in which there is nothing to slow down the shockwave.

Components have been sourced from around the world, mostly Great Britain. Emphasis is on quality for reliability and durability. The CellSonic Medical machine has a ten years warranty. The shock heads deliver 50,000 shocks and the Soft Start programme reduces pain.

Use CellSonic Medical to heal wounds of all types and cure sports injuries in humans and other animals. Only shockwaves cause stem cells to replicate.

**Quality approved to
ISO 13485:2003 &
ISO 9001:2008**

**CERTIFICATE
No. 08 0412 QS/NB**

Lithosplit

In production for fourteen years, Lithosplit is the world's most used kidney stone breaking machine. Very reliable, economical, portable and affordable, Lithosplit is the machine of choice for surgeons who are proud of their reputation. Supplied in a case and usually powered by the hospital's main oxygen supply. This is the original and best use for radial shockwaves.

CellSufflator

For many years we have made digiCARB, a high quality insufflator for the operating theatre. Based on that well proven design we created CellSufflator for injecting medical quality carbon dioxide with controlled volume and pressure to kill infected wounds and ulcers, fat cells and improve skin conditions on the body and face. For doctors only, this is not available in the high street beauty salon.

Synchrowave

Synchrowave is the sister machine to the venerable Lithosplit and shares the same proven design features. A physiotherapy machine with an extra; the electrotherapy current synchronized to trigger the instant the radial shock hits. Use it for muscle stimulation.

Vertical Stand

A neat and convenient way to place the small machines within reach.

CellSonic also makes electronic medical devices for urology, surgery and beauty; 17 machines, gels and creams.
